SUMMARY

Frontend Engineer with 1.6+ years of experience building production-grade **Angular** and **React** applications for **ERP** and **AI-powered healthcare** platforms. Specialized in integrating real-time features (WebSockets, Speech-to-Text), financial precision modules, and clinical workflow automation. Passionate about writing clean, scalable code that solves real problems in complex domains.

EXPERIENCE

Software Engineer

Jan 2025 – Present

Probeplus Innovative Solutions Private Limited

Bangalore, KA

- Spearheaded frontend development for **ERP and HMS platforms** using **Angular 16**, building scalable modules for patient management, billing, and clinical workflows.
- Engineered **AI-powered healthcare workflows** by integrating real-time **Speech-to-Text via WebSockets**, enabling seamless doctor-patient conversation capture and reducing manual documentation effort by **~40%**.
- Built **AI-generated medical summary interfaces**, transforming consultation data into structured, editable discharge summaries for faster clinical decision-making.
- Integrated **audio recording and waveform visualization** using WaveSurfer.js, enabling precise playback, scrubbing, and validation of medical conversations.
- Designed and developed **reusable component libraries** for HMS/ERP modules, ensuring consistency across complex workflows and reducing development duplication.
- Developed **financial calculation modules** using Decimal.js for accurate billing, taxation, and invoice generation without floating-point errors.
- Integrated **AWS S3, WebSockets, Google Maps API, jsPDF, and ECharts** to support file storage, real-time communication, report generation, and analytics dashboards.
- Implemented **robust REST API integrations** to power real-time data exchange across patient records, consultations, and billing systems.

Full-Stack Developer

Nov. 2024 – Jan. 2025

NyxSpectra Technologies Private Limited

Remote

- Built an end-to-end **full-stack healthcare documentation proof-of-concept**, showcasing AI-driven clinical workflow automation for an early-stage startup.
- Architected a real-time **speech-to-text** pipeline leveraging low-latency streaming audio processing, enabling accurate capture and transcription of patient-provider interactions.
- Developed an automated clinical note generation engine to transform unstructured conversational data into **structured SOAP notes**, significantly reducing manual clinical documentation overhead.
- Implemented logic to convert **SOAP** outputs into standardized **medical billing codes**, supporting healthcare compliance workflows.
- Designed the platform with scalability and extensibility in mind using modern web technologies.
- Implemented real-time **audio streaming and transcription handling** using WebSockets, ensuring low-latency data flow between client and backend services.
- Designed and integrated **end-to-end consultation flow** from audio capture to structured output, enabling seamless transition from raw input to finalized clinical documentation.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Typescript, HTML5, CSS3

Frontend: Angular 16, React, Redux

Backend: Node.js, Express.js, RESTful APIS, Clerk, Stream, Inngest

Tools and Technologies: Git, Bitbucket, Jira, Postman, Websockets, Google Maps API, jsPDF, Echarts, GitHub Copilot, Git, Chrome Devtools, bcrypt.

Concepts: Full-Stack Development, API Design, Financial Systems, ERP workflows, CI/CD Pipelines

EDUCATION

Amal Jyothi College Of Engineering

Bachelor of Technology in Information Technology

Kottayam, Kerala

July. 2019 – July. 2023
